PR-14

4-Ports PS/2-VGA KVM Switch

w/ OSD & Multi-Hotkey

Product Overview

The PR-14 is a reliable KVM switch for use in the home or office, as well as in a server-room or industrial computer environment. With four ports, a user can connect several computers and control them all from a single console. Conserving desktop space or rack-space with only one console makes a KVM switch super beneficial, and with the reliable PS/2 connections and support for high resolutions, there are no drawbacks to using the PR-14. The intuitive On-Screen Display also lets the customer name the individual ports to limit the guess-work when switching from system to system.
